

Xedion Line

Xedion Line is a supple, strong and clear mono that is perfectly spooled, in fact its so good it is difficult to see on the spool. It has a degree of stretch that is important when playing fish reducing line failure and lost fish. The accurate diameter will offer the choice of using the correct size line that will undoubtedly lead to more fish in the net.

Manic Impact Feeder line

Manic Impact Feeder line is strong, robust and reliable with a limited stretch factor.

These characteristics offer improved bite detection and contact on the strike that is important when fishing at range or in flat calm conditions when bites are shy.

It is also a great choice for the pellet waggler on commercial fisheries where it is important to stay in contact with the float and hit those lightning quick bites.
